

1. Project Overview

Project Name: Process Automation

Purpose: The Process Automation System automates repetitive tasks by executing them automatically based on predefined schedules or triggers.

2. Test Objectives

Verify that:

- User can create and access account with valid credential,
- unique username are maintained
- password are store correctly
- valid login authentication is performed
- user are granded access according to their assigned role
- File can be created, opened, updated, deleted and logged successfully without data loss or error

- Task are scheduled correctly,
executed at the specified date and time
- invalid scheduling request are
rejected

3. Modules Under Test

Module	Priority
Account Management	High
File handling	Medium
Scheduling	Medium

4. Passes Test Cases:

Test Case ID	Test Scenario	Expected Result	Status	Priority
TC_01	Login with valid user username and password	User dashboard should open successfully	pass	High
TC_02	Login with invalid username	Display "Invalid Username or Password"	pass	High
TC_03	Login with invalid password	Display "Invalid Username or Password"	Pass	High
TC_04	Verify role-based login(Admin)	Only Admin Dashboard should be displayed	Pass	High
TC_05	Verify role-based login (User)	Only user Dashboard should be displayed	Pass	High
TC_06	User clicks Logout	User should return to Main Menu	Pass	Medium
TC_07	Enter invalid menu option after login	Display "Invalid Choice" message	pass	low
TC_08	Try duplicate username while creating a user	system should rejected duplicate	Pass	High
TC_09	Open File Handler from user Dashboard	File Handler menu should open	Pass	Medium
TC_10	Perform file operation	File action should be stored in file_log table	pass	Medium
TC_11	Open non-existing file	Open non-existing file Display "File not found"	Pass	High

TC_12	Invalid file path	Display error message instead of crashing	pass	high
TC_13	Open Scheduler from Admin Dashboard	Scheduler menu should open	Pass	High
TC_14	Schedule a valid task	Task should be saved successfully	Pass	High
TC_15	Schedule task with past date/time	System should reject the schedule	pass	High
TC_16	Invalid date/time format Pending Medium	Validation message should appear	Pass	medium
TC_17	Scheduler execution	Task should execute at scheduled time	Pass	Medium

5.Bugs Found:

Bug No	Test Scenario	Issue	Status	Priority
BUG-01	Login with empty username , Password	No validation before calling login()	Fail	High
BUG-02	Both fields empty	System directly calls login() instead of showing validation message	Fail	High
BUG-03	Open file that does not exist	Program may raise FileNotFoundError if exception handling is missing	Fail	High
BUG-04	Schedule task with invalid date or time	Invalid date/time may be accepted or cause program crash if validation is missing	Fail	High
BUG-05	Schedule duplicate task	Same task can be scheduled multiple times cause duplicate validation is not present	Fail	Medium

BUG-06	schedule task in past	past date time may be accepted if no validation is implemente d	Fail	High
BUG-07	Delete non-existing file	Program may crash instead of displaying "file not found"	Fail	Medium
