

QA INITIAL ANALYSIS DOCUMENT

Project Title: Automatic Task Scheduler

Prepared By: Bhoomi Sapke (QA)

Date: 23/6/2026

1. Purpose

The purpose of this document is to analyze the project requirements received from the Product Owner / Scrum Master and prepare the testing plan for the Automatic Task Scheduler project.

2. Requirement Understanding

Based on the project documentation, the application will provide the following functionalities:

- Create new tasks
- Assign task priority (High, Medium, Low)
- Set task date and time
- View scheduled tasks
- Search tasks
- Update task details
- Delete tasks
- Mark tasks as completed
- Display reminder notifications
- Maintain task history
- Sort tasks by date, time, and priority
- View completed and pending tasks separately

3. QA Responsibilities

The QA activities for this project include:

- Requirement analysis
 - Test case preparation
 - Functional testing
 - Validation testing
 - Notification testing
 - Defect reporting
 - Retesting after bug fixes
-

4. Test Case Preparation

Based on the project requirements, test cases have been prepared to validate all major functionalities of the application.

Test Case ID	Test Scenario	Test Steps	Expected Result	Status
ATS_TC_001	Create New Task	Enter valid task details and save	Task should be created successfully	---
ATS_TC_002	Empty Task Title Validation	Leave title blank and save	Validation message should appear	---

ATS_TC_003	Priority Selection	Select High, Medium, or Low priority	Priority should be saved correctly	---
ATS_TC_004	Date & Time Validation	Enter valid future date and time	Task should be scheduled successfully	---
ATS_TC_005	View All Tasks	Open task list	All tasks should be displayed	---
ATS_TC_006	Search Task	Search using task name	Matching task should be displayed	---
ATS_TC_007	Update Task	Edit task details and save	Updated details should be saved	---
ATS_TC_008	Delete Task	Select task and delete	Task should be removed successfully	---
ATS_TC_009	Mark Task Complete	Mark a task as completed	Status should change to Completed	---
ATS_TC_010	Reminder Notification	Set task reminder for 1 minute later	Notification should appear on time	---
ATS_TC_011	View Completed Tasks	Open completed tasks report	Only completed tasks should be shown	---
ATS_TC_012	View Pending Tasks	Open pending tasks report	Only pending tasks should be shown	---
ATS_TC_013	Data Storage Validation	Create task and restart application	Task should remain saved in database	---
ATS_TC_014	Sort by Priority	Sort task list by priority	Tasks should be arranged correctly	---
ATS_TC_015	Sort by Date & Time	Sort tasks by date/time	Tasks should be arranged chronologically	---

5. Current Status

- Requirement document received from Scrum Master.
 - Requirement analysis is completed.
 - Test cases are prepared.
 - Waiting for application to build from the developer.
 - Testing execution has not started yet.
-

6. Next Steps

- Receive build from developers.
 - Execute prepared test cases.
 - Record test results.
 - Log defects if found.
 - Share testing status with Scrum Master.
-

7. Conclusion

The project requirements have been reviewed and understood. Test cases have been prepared based on the provided requirements. Testing activities will begin after the development team provides the application build for QA verification.
