

Email Automation System – User Manual

TEAM : NOVA

Project Overvie

- The **Email Automation System** is a Python-based application that helps users manage and send emails easily.
- It provides features like email management, bulk email sending, email tracking, spam management, templates, voice message writing, reports, and graphical analysis using a pie chart.
- The system reduces manual work and improves email management.

1. EMAIL AUTOMATION LOGIN

- **Menu**

1. Login
2. Sign Up / Register
3. Exit

Login

- **Purpose:**

Allows registered users to access the system.

- **Process:**

- Enter your Gmail address.
- Enter your login password.
- The system allows up to **3 login attempts**.
- The entered details are checked with the saved data in **logs.csv**.
- If the account is not found, the user must register first.
- After successful login, the Main Menu is displayed.

Sign Up / Register

- **Purpose:**

- Allows a new user to create an account.

- **Process:**

- Enter your Gmail address.
- Create a login password.
- Enter your Gmail App Password.
- Gmail account must have 2-Step Verification enabled.
- Complete the registration process successfully.
- After registration, log in using your email address and login password.

2. Main Menu

- The Main Menu provides access to all project modules.
 1. Email Management
 2. Email Sending Options
 3. Email Tracking
 4. Spam Management
 5. Reports & Logs
 6. Templates
 7. Voice Message Writing
 8. Pie Chart
 9. Exit

3. Email Management

1. View Email Records
2. Update Email Status
3. Delete Email Record
4. Back

View Email Records

- Displays all email records.
- All records are stored in **email_records.json**.
- Users can directly view the saved email records.

Update Email Status

- Update the email status using the **Email ID**.
- Status can be changed to
- **Pending**
- **Completed,**
- **Failed**
- **Spam.**

Delete Email Record

- Delete an email record using its **Email ID**.

2. Email Sending Options

1. Send Single Email
2. Send Multiple Emails
3. Send Bulk Email (Common Message)
4. Send Personalized Bulk Email
5. Back

Send Single Email

- Enter the recipient's email address.
- The system checks whether the email exists in **email_records.json**.
- If found, the email is sent successfully.

Send Multiple Emails

- The system automatically sends all emails with **Pending** status

Send Bulk Email (Common Message)

- Reads email addresses from **bulk_email.csv**.
- Sends the **same subject and message** to all recipients.

Send Personalized Bulk Email

- Reads email addresses from **bulk_email.csv**.
- Allows a **different subject and message** for each recipient.

3. Email Tracking

1. Search by Recipient
2. Search by Subject
3. View Email Details
4. Back

Search by Recipient

- Search email records using the recipient's email address.

Search by Subject

- Search email records using the email subject.

View Email Details

- View complete email details using the **Email ID**

4. Spam Management

1. Mark as Spam
2. View Spam List
3. Delete Spam Email
4. Back

Mark as Spam

- Mark an email as spam.

View Spam List

- Display all emails marked as spam.

Delete Spam Email

- Delete spam emails from the records.

5. Reports & Log

1. View Report Summary
2. Export Report to CSV
3. View Logs
4. Back

View Report Summary

- Displays the overall email report.
- Shows:
 - Total Emails
 - Completed Emails
 - Pending Emails
 - Failed Emails
 - Successful Emails

Export Report to CSV

- Export the report to a CSV file.

View Logs

- Display all system logs and activities.

6. Templates

1. Create Template
2. Update Template
3. Delete Template
4. View Template
5. Exit

Create Template

- Create a new email template.

Update Template

- Edit an existing template.

Delete Template

- Delete a template.

View Template

- View all available templates.

7. Voice Message Writing

- Users can write an email message using their voice.
- The voice is converted into text.
- The message is saved successfully for future use.

8. Pie Chart

- **Purpose:**
Shows email statistics graphically.
- The pie chart displays:
- Completed Emails
- Pending Emails
- Failed Emails
- Spam Emails
- This helps users understand the overall email status easily.
